

All students should finish reading chapter 4 of the textbook in preparation **for this assignment** and the next lecture.

Distribute the following questions across the members of your group. You will share your solutions (and most importantly the *method* of your solutions) during the next lecture period. Divide up the questions so that **each** question has at least two solutions from different group members.

For **questions 1, 3, and 5** calculate only the **Follow** sets for the grammars specified.
