

## REs to DFAs

Design a **single algorithm** than can convert  
the following three regular expressions into their equivalent DFA.

1.  $ax|z$
2.  $(ax|aa^+x^*a)^+$
3.  $(t^+q^*|rqtq^*|t^4q^4)$

## REs to DFAs

Design a **single algorithm** than can convert the following three regular expressions into their equivalent DFA.

1.  $ax|z$
2.  $(ax|aa^+x^*a)^+$
3.  $(t^+q^*|rqtq^*|t^4q^4)$

These are not complicated REs, certainly not as complicated as some of your LGA solutions! But contemplating an algorithm for **just these three examples** is a challenge — and for scanning program source, we'll need an algorithm for **any** regular expression!
